THE NORWEGIAN TIMELINE	
DATE/YEAR	NOTES
1992	The Norwegian hatched at a nest near 40 Kilometres South of Oslo. She was ringed on 27/06/1992
1995	Excerpt from the Scottish raptor Monitoring Group 1995, Raptor Roundup. "Of special significance was the nest of a Scandinavian ringed female breeding for the first time; if her eggs had not be stolen by Egg Thieves, she could have contributed some new genes to the Scottish Osprey population'
1996	Found to be breeding at Nest at a Morayshire Scotland, she bred at this nest between 1996 and 1999
2000	Changed Partner and moved Nest to B15 near Glenferness in Nairn. Green05(00) Hatched. Translocated to Rutland Water in 2000, Returned as a 2 Year Old in 2002. In 2003 Green 05(00) paired with White 03(97) and raised 3 chicks at Site B Rutland Water. Green05(00) raised 17 chicks between 2003 and 2008 inclusive all with the same partner  The female 05(00) - she has a distinctive breastband
2001	Red 08(01) Hatched RED 08(01)

	He raised 8 Chicks between 2009 and 2012 Inclusive with Yellow 30(05) (His Niece) Red 08(01) is the Father of Blue 5F breeding Female at Llyn Clywedog 2000 to present who has raised 14 chicks of her own with an Unringed partner  Red 08 at the edge of the pond
2002	Green SK hatched FLIGHT OF GREEN SK This is a juvenile female osprey; one of a brood of three (two females and one male) and she is the youngest. Her female parent is a Norwegian osprey which was ringed as a chick 40 kilometres south of Oslo on 27th June 1992; she was found breeding at a nest in Morayshire in 1996 to 1999 and then moved to a nest in Nairnshire in 2000 and ousted the female S07. She bred successfully with the old male, which is now 15 years old and was reared at a nest just 3 kilometres distance. These birds are also the parents of chicks translocated to

	Rutland water in 2000 (T05) and 2001 (U08); while the male was the parent of R06 in 1999. This juvenile female was ringed on 10th July 2002 and weighed 1595 gms (a green and white colour ring SK was fitted to the left leg.) On 24th August, I retrapped the bird which had been flying for about a month. It was in excellent condition, weighing 2040 grams, which is heavy for an osprey. It was fitted with a satellite transmitter. Copyright RDWF and the Wayback Machine 
2003	Yellow HA was ringed as a male chick at nest B15 near Glenferness in Nairn on 8th July 2003. His mother had come from Norway while his brother was satellite tagged and made a successful migration to West Africa and wintered at the mouth of the Senegal River, before the battery went flat. Yellow HA was first identified at FindhornBay in 2007, and was seen again in 2009 and 2010 in the bay and visiting nests trying to find a mate and a nest. In fact it was looking good for him in 2010 at nest B10 but he was kicked out by the later returning male. In 2011, he took over that nest and paired up with Morven and bred there successfully for the last three years. He regularly fishes in FindhornBay. His transmitter, fitted in July, was one of the new GSM/GPS transmitters which communicate data through the mobile phone system. Copyright RDWF Information found suggests that one of Yellow HA chicks from 2013 was Translocated to Spain ringed Yellow P3, later died of Electrocution. YELLOW HA (RDWF)

	Yellow HA paired with White PE Morven in 2011 and raised the following chicks 2011 3 chicks 2012 1 chick 2013 3 chicks 2014 Yellow HA killed by new Male  Yellow HA Copyright RDWF
