BIRDS TRANSLOCATED TO RUTLAND WATER				
DARVIC DETAILS	GENDER	YEAR	HATCH LOCATION	TRANSLOCATED TO RUTLAND WATER
		1996		Ring numbers not declared, However, a number of chicks died through natural causes, mirroring natural occurrences in the wild population. However, in September four birds set out on the initial stage of their migration. Via a BTO report a further bird died during migration. Apparently the license for this project stipulated that the third chick was the one to be taken, thus the smallest and weakest, resulting in increased mortality

			7R 7S	The next time we hear of Green 7B is during the translocation to Rutland in 2005. A pair of young ospreys had been orphaned because of the death of their mother and their father (Orange VS) was unable to cope. Now of course this female was Green 7B.
