POINTS OF INTEREST	
08(97) & 01(99),06(01)	SIBLINGS **April 25th 2002** **News of 08's sister** While 08(97) continues to wait for a mate at Rutland Water, his younger sister R01(99) has been identified at a nest near Dundee. News came this week that Keith Brockie had read this bird's ring number (White 01 on a black background) while monitoring nest sites in that area. 08(1997) and 01(1999) were both translocated birds and came from the same nest, so in all probability they are siblings. The female 01(1999) was present in Nottinghamshire for about a week during June last year. It is typical of young females not to return to their natal site to breed, so it is not a surprise that 01(1999) has chosen somewhere other than Rutland Water. It is males that tend to return and of the translocated cohort it is only males that have returned. Full details of the sightings of all the translocated Ospreys are on the Translocation: Results page of this website. **And a still-younger sister in Portugal** Another probable sibling is U06(2001), also taken from the same nest. Her radio transmitter shows that she is still frequenting the area NE of Lisbon where she spent her first winter. A fourth translocated Osprey, probably another sibling, was the ill-fated T09(2000).
08(97)/01(99)/09(00) &06(01)	ALL FROM SAME NEST IN SCOTLAND

A lucky escape for red 08

In January 2007 we heard about the lucky escape of the most recent translocated Osprey to return to Rutland. We later received some more details and pictures of the bird's escape from a netted fish pond near Farnham in Essex, two months before it arrived at Rutland last year.

On 24 April 2006, near Farnham in Essex, red 08 got himself trapped in netting over a fish pond. The netting is there to discourage Herons from taking the fish, but obviously the Osprey had not seen the netting and dived through.

The owner of the pond did not know it was an Osprey but did realise that the large bird of prey was unable to escape. The bird appeared unharmed and quite calm. The owner called for help and, when local falconer James Rose arrived, he was amazed to find that it was an Osprey.

James said:

> I offered the bird a piece of salmon on the fist (using a double thickness glove of course); it took a little and then backed away.
>
> I pulled back the netting and asked the owner to direct a net behind the bird to prevent it stepping backwards and proceeded to pick it up by grabbing its legs. After a few pecks and some mantling it was safely in a box and placed in the back of my van. I phoned my local vets and took the Osprey to be checked over as it had some minor abrasions on its left wing. The vet was somewhat taken aback when I took the bird from its box, he gave it the once over and fortunately the abrasion was only superficial.

Red 08 at the edge of the pond

The bird was offered fresh salmon from the supermarket and kept in a pen overnight. The next day it was possible to release it.

15/05/2016	RIVER GWASH OSPREYS	As you know we have worked alongside the fabulous Rutland Osprey Project in creating a unique hide opportunity in England. Since March there has been 7 male Ospreys visit Horn Mill Trout Farm. 6 of those are from the 7 breeding pairs in Rutland What follows is a fascinating insight of these birds written by Tim Mackrill Ospreys visiting Horn Mill Trout Farm 28(10) 28(10) is a six year-old male who fledged from Site B in 2010. He returned for the first time two years later and was also seen several times at Clumber Park in Nottinghamshire. In 2014 28 paired up with Maya on the

						Manton Bay nest at Rutland Water Nature Reserve when her previous mate, 5R(04), failed to return. Within a matter of days the birds were sitting on eggs, but then 28 was ousted from the nest by 33(11). Later that summer he settled on an artificial nest away from the reserve. In 2015 28 returned to the same nest and paired up with a three year-old female, 2F(12) and raised a single chick. This spring he returned to Rutland on 23rd March and returned to the same nest. 28 is easily identified by a damaged right wing which is almost certainly the result of an old injury that he sustained before returning to Rutland in 2012. 33(11) 33(11) is a five year-old male who fledged from Site B in 2011. He first returned to Rutland in 2013 and then ousted 28(10) from the Manton Bay nest in 2014. Last summer 33 and Maya raised three very strong chicks at the Manton Bay nest, watched by people all over the world thanks to the Rutand Ospreys nest cam. This spring 33 returned to Rutland on 27th March and Maya subsequently laid eggs earlier than ever before. The eggs are due to hatch this weekend (14/15 May).

						01(09) 01(09) is a seven year-old male who fledged from the Site B nest in 2009. He first returned to Rutland in 2011 and has been breeding with well-known female 5N at an off-site nest since 2013, raising a total of eight chicks. This spring 01 returned to Rutland on 4th April. In recent years he has been a regular visitor to the fish farms at Horn Mill and Ryhall, and was even photographed catching two fish simultaneously in 2015. No wonder he is known as a fishing machine! 30(10) 30(10) fledged from the Manton Bay in 2010, and first returned to Rutland in 2012. In 2015 he was one of two young males who attempted to oust seventeen year-old 03(97) - otherwise known as Mr Rutland - from the Site B nest. The amazing drama was filmed by the BBC Springwatch cameras. Eventually 03 prevailed, but when he failed to return this spring, 30 had the opportunity to take-over the Site B nest. Sadly 03's mate also failed to return and so 30 is still waiting to breed for the first time.

						06(09) 06(09) is a seven year-old male who fledged from the Site O nest in 2009. He first returned to Rutland two years later and then bred for the first time at an off-site nest in 2014. He has raised three chicks at this nest over the past two summers. In December 2015 06 was photographed at his wintering site on the Barbarie coast in Northern Senegal. This year 06 returned to Rutland on 31st March. 11(10) 11(10) fledged from the Site N nest in 2010 and then first returned to Rutland in 2012. In 2013 he paired up with another three year-old bird, 25(10), at an off-site nest and together they raised three chicks; an exceptional effort by two inexperienced first-time breeders. 11 and 25 have continued to breed together each year since. 1J(13) 1J(13) fledged from the Manton Bay nest in 2013. He first returned to Rutland last summer, and was also seen at Fishlake Meadows in Hampshire. During the winter 1J was photographed at his wintering site in Cadiz in southern
